This deliverable represents the proposed system that Team 7 will build Gohvan Construction to stream line the business process Gohvan Construction is currently using. Deliverable 1 indicates the analyses of Gohvan Construction and the existing system that is currently in place, as well as the history and organisational structure. Thus it will include a project request, preliminary investigation, problem analysis, requirement analysis and feasibility/decision analysis.

1. Deliverable Introduction

Deliverable 1 represents the proposed system solution that Paralinear Solutions will provide and build for Gohvan Construction to streamline the business process and project life cycles. Deliverable 1 indicates the analyses and in-depth research gone into understanding Gohvan Construction and their existing system currently in place, as well as the history and organisational structure of the company. Thus, it will include a project request, preliminary investigation, problem analysis, functional requirement analysis and feasibility/decision analysis on other existing systems that can be beneficial to implement instead of the Paralinear solutions system proposed.

Deliverable Summary

This document is the full analysis and identification of the company "Gohvan Construction" to identify the systematic and business problems faced and that Gohvan construction deals with on a daily basis and throughout their project life cycles. This deliverable will represent the proposed system that Paralinear Solutions (Team 7) will offer to build for Gohvan construction. Paralinear solutions will conduct many forms of research, analysis, and take in depth looks to the details and daily functions of the business to identify the business and system problems faced. A proposed system will then be stated and explained on how it will improve Gohvan Constructions business and project life cycle, as well as the functional aspects the new system will provide to solve the business problems identified.

The proposed system that Paralinear Solution will offer Gohvan construction will be a full business solution which offers features that improve automation within the company, Prevent Human error at all possibly project life cycle stages and through the operation of the business. Digitization of reports and documents being worked on throughout the company. Reduce expenditure as the system encourages Gohvan construction to move away from a more paper-based approach. Effective storage methods for company and employee documents. Human resource management and supplier management. All this functionality will be integrated into the proposed system thus overall improving and optimizing the company's efficiency.

RALINEAR

2. Client Information

2.1 Introduction

This section defines the history and background of the business, Gohvan Construction. The business structure, hierarchy as well as its environment will be investigated to set the right foundation in understanding how information flows through the business. A brief introduction of the owner of the business will also be stated.

2.2 Organisation history and Background

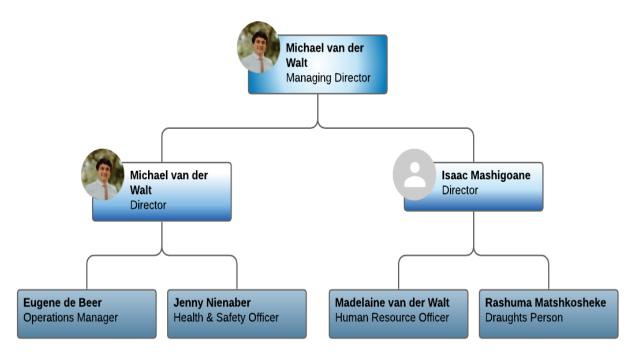

Gohvan Construction is a company that provides construction solutions to meet unique requirements of their clients. The company has been involved in the civil construction industry since 2006 and is now a leading force within the engineering and Construction industry. Against the Vodacom Safety Standards, they have notably been vetted and found to be competent by the company Assaf.

Various and extensive projects have been completed by Gohvan Construction such as various base transceivers for Vodacom, MTN and Cell C, shared sites as small Civil work projects for MTN and Cell C, turnkey solutions, road works and upgrades and more projects that live up to their reputation of note throughout the years.

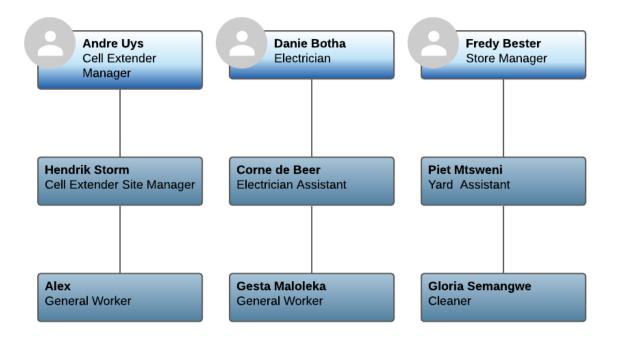

The ability to plan, document and manage these projects have set this company apart. The team members eagerly transfer skills and knowledge on a daily basis. They have taken on a holistic approach by ensuring that the outer and inner workings of the company meet high standards of quality and workmanship.

2.3 Company structure

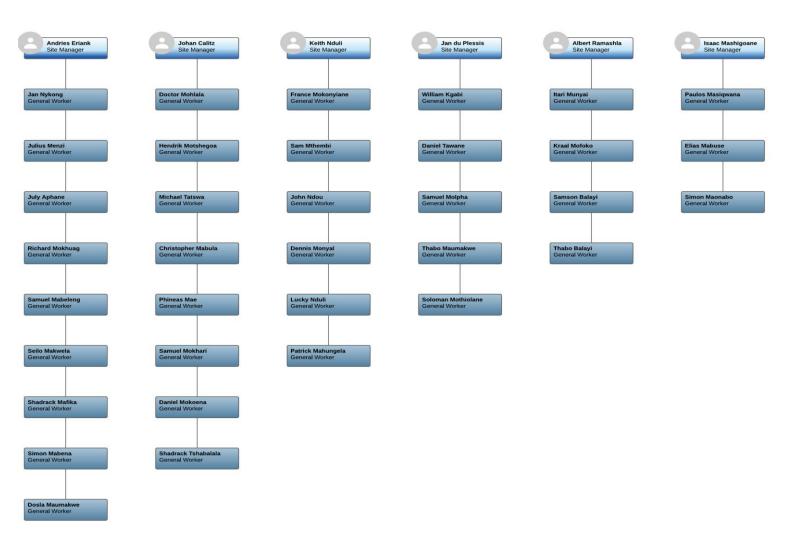

2.3.1 Management Team Structure

2.3.2 General Team Structure

Project Proposal – Paralinear Solutions

2.3.3 Area of business

Gohvan Construction's area of business is the civil construction industry. Specialising in the designing, constructing, and installing cellular towers.

2.3.4 Business environment

The current business environment is mainly paper based, and administration is handled manually. Business processes are completed by the Management Team of Gohvan Construction. This team consist of:

- Managing Director
- Directors
- Operations Manager
- Health & Safety Officer
- Human Resource Officer
- Draughts Person

The physical construction and installation are carried out by the general teams. General teams consist of The Site Manager and the General Employees. Govhan Construction has Stakeholders essential to their completion of work. Namely the Client (Vodacom), Strategic Partners and Subcontractors. Govhan Construction currently only operates in the Northern Gauteng Area.

2.4 Contact particulars

Michael Van Der Walt is one of the Directors of Gohvan Construction and this role entails the overseeing of the Operations Manager, Health and Safety Officer, Human Resources Officer and Draughts person. Michael Graduated from the University of Pretoria, where he studied a Bachelor of Commerce in Informatics.

2.5 Conclusion

Analysing Gohvan Construction's background, history, and organisational structure; Has helped clarify the purpose of the company. The organisation's hierarchy helps display how the stakeholders communicate and it shows how the information travels in the company. Understanding the client in depth has provided Paralinear Solutions an extensive overview of how the company operates.

3. Project Request

3.1 Introduction

The project request documents the original request Gohvan Construction (also known as the client) had for Paralinear Solutions' system that the client would like to be implemented in their business.

3.2 Project Request

3.2.1 Overview

The client (Gohvan Construction) originally requested a system for their overall workings of the business. This includes a system that helps operations such as starting, keeping track of progress and finalising projects for construction sites regarding the upgrading and building of telecommunication towers and satellite sites. The requested system will need to help digitise the starting and establishing of a project making it easier for a client of Gohvan Construction to start a project with them and in turn reduce the overall completion time of the project. The system will need to help administration of the staff, business records, site resources and site allocations for projects teams for potential projects. The system will need to make it easier to record progress of a construction site and recording of the site completion process. The system will also need to help effectively record and capture invoicing for the business by having the system automatically compile invoices and notify their clients of the project and payments and respective parties. The new system needs to help convert the old mainly paper-based system to a system the digitises as much as possible of the current system.

3.2.2 The establishment of a project

The establishment of a project such as the business' Technical Site Survey Reports (TSS Reports) need to be digitised to help the speed, consistency, and efficiency of the establishment of a project so that the project can be started as soon as possible for Gohvan Construction's client.

3.2.3 The quotation of a project

The quotation of a project needs to be digitised to help the speed of the quote generation and to help reduce human error. By doing this it will help employees focus on more important areas that need more focus.

3.2.4 The administration of a project

The administration of a project needs to be digitised to help keep track of health and safety documents of staff, site drawings, compliance documents for sites and fully auto generate the business As-Built document which stores all a specific projects information.

3.2.5 The construction of a project

The construction of a project needs to be digitised to fully automate procurement and logistics of resources, site allocations to site teams, construction progress reports to managers and to maintain and record site quality.

3.2.6 The invoicing of a project

The invoicing of a project needs to be digitised to fully automate and record the invoicing of clients and their payments to ensure that Gohvan Construction's client receives the correct information and pay for the work Gohvan Construction is doing.

3.3 Conclusion

After the project request from Gohvan Construction we can understand what the client would like and start thinking of possible solutions to achieve this project request.

4. Preliminary Investigation

4.1 Introduction

This section provides a detailed overview of the problem, opportunities, assumptions, directives and techniques used for elicitation. This will assist us in identifying business needs, as well as solutions that can be used in order to meet system objectives.

4.2 Problem/Vision statement

| The problem of | Lack of automation |
|-----------------------------|-------------------------------------|
| Affects | Management |
| | Employees |
| The impact of which is | Loss of profits |
| | Decrease in efficiency of processes |
| A successful solution would | Reduced paper trail |
| | Less redundancy |
| | Increase in time and profits |

| The problem of | Re-submission of details |
|-----------------------------|---|
| Affects | Management Employees |
| The impact of which is | Loss of profits Decrease in efficiency of processes Low data integrity |
| A successful solution would | Reduced paper trail Greater efficiency Higher data integrity. Increase in time and profits |

RALINEAR

| The problem of | Paper based system |
|-----------------------------|---|
| Affects | Management |
| | Employees |
| The impact of which is | Loss of profits |
| | Increased time loss |
| | Decrease in efficiency of processes. |
| | Inadequate management of documentation |
| A successful solution would | Reduced paper trail |
| | Increase in time and profits. |
| | Greater effectiveness and efficiency of |
| | operations |

| The problem of | Minimal to no departmental integration |
|-----------------------------|---|
| Affects | Management |
| | Employees |
| The impact of which is | Loss of time and profits |
| | Inadequate communication of problems |
| | and solutions |
| | Decrease in efficiency of processes |
| A successful solution would | Adequate communication of problems and |
| | solutions |
| | Increase in time and profits. |
| | Centralized system that works efficiently |

4.3 Business Goals and Objectives

Gohvan Construction has requested a system for internal use by management and employees to ensure that information flows through the organisation in an effective and efficient way. The system must be implemented by October 2021 with the skills and resources of our team.

The company need a solution that will eliminate the repetitive labour-intensive value chain activities. This will allow processes to be faster and improve turnaround time.

The company requires a system that allows them to prevent user errors in order to improve data integrity. This can be done by ensuring certain details are only submitted once and saved by the system, without the need to re-submit.

The company requires an efficient and effective way of minimising expenditure. This can be done by ensuring there is no need to constantly submit data and by integrating departments to optimally use resources that will assist the business in the long run.

The company aims to optimize efficiency. This can be accomplished through providing a centralized system that works efficiently between the various applicable parties.

4.4 Problem, Opportunities and Directives

| PROJECT: | Gohvan Construction | PROJECT MANAGER: | Tshepang Mashao |
|---------------|---------------------|--------------------|-----------------|
| CREATED BY: | Matthew Veltman | LAST UPDATED BY: | Matthew Veltman |
| DATE CREATED: | 4/01/2021 | DATE LAST UPDATED: | 04/07/2021 |

| Brief Statement of Problem | The impact the problem is causing | Expected benefits from any potential solution | How quickly can the problem potentially be resolved | What is the underlying source of the problem? | What will it cost to solve the problem? |
|---|--|---|---|--|--|
| As built document completion. | Administration is being held back and overall completion of project is delayed. | Decrease project completion time and help ease workload of administration for projects. | 7 months | System to support workforce is paper-based and problematic. | R0; business knowledge input from the client; 7 months of hard dedicated work by Paralinear solutions. |
| 1. Progress reports of construction projects. | Managers need to waste valuable time asking site workers for regular updates and photos of progress. | Increase productivity of both site workers and managers. Also allowing a timely log of site progress. | 7 months | No reminder or regulations in place for progress reports. | R0; business knowledge input from the client; 7 months of hard dedicated work by Paralinear solutions. |
| 2. Quotes and Invoices need to be in excel format for Vodacom | Makes it harder to auto generate invoices and compile them. | Increase efficiency and speed of compilation. | 7 months | Excel format currently manual. | R0; business knowledge input from the client; 7 months of hard dedicated work by Paralinear solutions. |
| 3. Some aspects of forms are redundant / documents | Makes it longer and more difficult to fill in. | Increase efficiency and speed of the filling in of the forms / documents. | 7 months | Forms / documents were last updated in 2012. | R0; business knowledge input from the client; 7 months of hard dedicated work by Paralinear solutions. |

Project Proposal – Paralinear Solutions

| 4. Site photos are difficult to upload and keep track of in the system and site file. | Potential for photos to be lost or delayed when they are supposed to be uploaded. | Increase in efficiency and makes sure no data is lost. | 7 months | No specific method to upload the photos. | R0; business knowledge input from the client; 7 months of hard dedicated work by Paralinear solutions. |
|--|--|--|----------|---|--|
|--|--|--|----------|---|--|

| E | Brief Statements of | Urgency | Visibility | Annual | Priority | Proposed Solution |
|----|--|---------|------------|--|----------|--|
| | Opportunity | | | Benefits | or Rank | |
| 1. | Transform manual completion of As- Built document to being automatically completed. | High | High | Improve site completion time. | 3 | Build a more effective system that compiles all the information automatically into the as built document. |
| 2. | Transform completion of TSS report on paper to being completed on a tablet. | High | High | Improve site check time and start construction faster. | 1 | Build a more effective system that allows entering and submitting of site information to be faster. |
| 3. | Make automatic reminders for tasks to ensure everything is completed in a timely manner. | High | High | Improve site completion time. | 4 | Build a more effective system that ensures tasks are completed when needed. |
| 4. | Transform manual compilation of invoices to being automatically completed. | High | High | Improve transaction completion time | 2 | Build a more effective system that can compile all relevant information into the invoices. |
| E | Brief Statements of | Urgency | Visibility | Annual | Priority | Proposed Solution |
| | Directive | | | Benefits | or Rank | |
| 1. | Before a site can be signed off the As- Built document needs to be completed. | High | High | Reduce overall completion time of site projects. | 3 | Transform manual completion of As-Built document to being automatically completed. |
| 2. | Once a Radio frequency report is obtained and sent an invoice to the client the client has | High | High | Ensure client pays for site construction to | 1 | Transform manual system to automatic with reminders for client to pay within the time period. |

| | within 7-10 days to pay 90% of initial claim. | | | ensure minimum risk on Gohvan Construction. | | |
|----|--|------|------|--|---|---|
| 3. | Once the site has been signed off the client is sent an invoice to pay the last remaining 10% of initial claim. | High | High | Ensure client pays for site construction after its completion. | 2 | Transform manual system to automatic with reminders for client to pay within the time period. |

4.5 Preliminary assumptions and constraints

4.5.1 Assumptions

- The Director is aware of implementing a new system as he has a degree in BCom Informatics.
- The employees will be able to easily adapt to a new system.
- The business has well equipped technology to help with the implementation of the new system.
- The project manager is over-loaded with forms and documents for each site to complete in a timely manner.
- The current system is causing a large disruption with documents and tasks being completed when they need to be.
- All employees are able to use technology.
- All invoices and quotes are done in excel.
- All site initial site drawings are done on paper.
- There is extremely sensitive data on the system.
- The business is aware of Paralinear's potential and intention with the system.

4.5.2 Constraints

- The employees are going to have to learn the system.
- The system will need to be in a timely manner.
- The Paralinear team will need to learn new skills to develop the system.
- The system might slightly be different in the final completion to what was originally agreed on.

4.6 Elicitation techniques and the use of these techniques

4.6.1 Brainstorming

Brainstorming is a technique used to generate topics or ideas to help solve a problem. This helps create solutions to problems we might face as well as think of problems that we have not thought of or could possibly encounter.

4.6.2 Interviews

Interviewing is when two or more people come together to discuss certain topic/s. This process generally involves one party asking another party questions to gain knowledge on a desired topic/s. We used this technique to gain knowledge of Gohvan Construction and its inner workings and problems that needed solutions.

4.6.3 Document Analysis

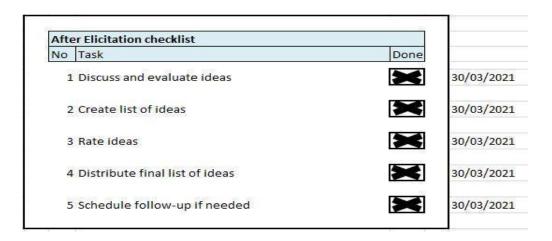

Document Analysis is used to assess documents with the intention of gathering information about the business. This helps us to gain insight and knowledge of concepts and processes that the company does on a day to day or regular basis. It is limited to an as-is situation, but it acts as a means of cross-checking requirements with other sources.

| During Elicitation checklist | | | | | | | |
|------------------------------|--|------|--|--|--|--|--|
| No | Task | Done | | | | | |
| 1 | Conduct detail review | | | | | | |
| 2 | Capture notes | | | | | | |
| 3 | Identify conflict in notes | | | | | | |
| 4 | Identify duplicate notes | | | | | | |
| 5 | Noting gaps | | | | | | |
| 6 | Perform additional research if necessary | | | | | | |

| Afte | After Elicitation checklist | | | | | | |
|------|---------------------------------|------|--|--|--|--|--|
| No | Task | Done | | | | | |
| 1 | Capture findings in a document | | | | | | |
| 2 | Share results with stakeholders | | | | | | |

4.8 Description of Elicitation Techniques

4.8.1 Brainstorming

4.8.1.1 Before Elicitation

- <u>Define the area of interest</u>
 - Discuss project management, work schedule, assigning of tasks, work ethic etc.
- Define time limit
 - o 60 minutes
- Identify participants
 - Vincent Yu, Michael Vosloo, Tshepang Mashao, Amore Rossouw and Matthew Veltman
- Identify facilitator
 - o Michael Vosloo and Vincent Yu
- Invite participants
 - Meetings were arranged on WhatsApp with time and location on Hatfield campus.
- Invite facilitators
 - Meetings were arranged on WhatsApp then google meet invites were sent out through email.
- Meet with participants to explain expectations
 - Not applicable ass all expectations were discussed over WhatsApp.
- Establish evaluation criteria
 - o What will be the best way to complete this deliverable?
 - What will be the best way to ensure everything is done in a timely matter?
 - What solutions to improve the system will be the best and most achievable?
- Book venue/meeting room
 - No booking needed, we just gathered in the IT coffee room following covid regulations.

- 4.8.1.2 During Elicitation
- Share new ideas
 - Use a tablet to do the TSS report.
 - \circ Create a progress meter for the progress of site builds.
- Record all ideas
 - Create a progress meter for the progress of site builds.

- Use a tablet to do the TSS report.
- Make the as built document fully automatic.
- All members of Paralinear need to be aware if they need help, they need to ask for it.

<u>Build on ideas</u>

- Use tablet also for site drawings as well as TSS report.
- <u>Elicit as many ideas as possible</u>
 - Tablet for TSS report and site drawings.
 - Progress meter for site builds.
 - As built document fully automatic.

4.8.1.3 After Elicitation

- Discuss and evaluate ideas
 - During the meetings all the group members participated in the brainstorming which allowed ideas to bounce off everyone. We decided to discuss what problems we wanted to solve for the business as well as how to do it. We wanted to make a space where everyone in the group felt safe to share their opinions and ideas and to ensure that members knew if they had any trouble during the project, they could ask for help.
- Create a list of ideas
 - Create a progress meter for the progress of site builds.
 - Use a tablet to do the TSS report.
 - o Make the as built document fully automatic.
 - All members of Paralinear need to be aware if they need help, they need to ask for it.
- Rate ideas
 - All ideas that are raised are very valuable even if they are not used in the overall solution as the help stimulate more ideas.
- Distribute a final list of ideas
 - Not applicable.
- Schedule follow-up if needed
 - No, follow-up was created.

4.8.2 Interviews

4.8.2.1 Before Elicitation

- <u>Decide which type of interview</u>
 - The interview will be unstructured as we have questions for Gohvan Construction, but they will also discuss their processes and procedures.
- <u>Decide on interview goal</u>
 - Ask questions on confusing topics we have encountered while deciding on a solution for the system. We want to gain a very well-rounded understanding of the policies and procedures.
- <u>Create a list of questions</u>
 - What are the alt steps for 90% and 10% payments/invoice?
 - Does the operation manager send TSS report back?
 - Ask about draftsman drawings/ second drawings after TSS and when CAD drawing happens.
 - How does procurement / logistics work?
 - How does logistics of stock work?
 - o Ask how site allocation works?
 - What entails "item-specific compliance certificates"?
 - How does signing off on a completed site work?
 - How do you want subcontractors to be contacted?
- <u>Decide on a location for an interview</u>
 - o Google meets
- Invite interviewees
 - o Interviewees were invited through email.

4.8.2.2 During Elicitation

- <u>Describe the purpose of the interview</u>
 - The purpose is to gain a greater and overall understanding of the current system to help develop a better system.

- <u>Confirm interviewees' roles</u>
 - Michael van der Walt is the Director of Gohvan Construction
- <u>Address any concerns</u>
 - Did this through the interview's questions.

- Explain how information will be recorded and shared
 - The overall session is screen and voice recorded as well as key points are written down for later discussion amongst Paralinear solutions.
- <u>Ask predefined questions</u>
 - Done during interview.
- <u>Summarize the session</u>
 - Session started with greetings where it later went to the questions we had for Michael and then head to a discussion about the system between Paralinear solutions and Michael from Gohvan Construction.

4.8.2.3 After Elicitation

- Organise information
 - Information gathered was stored on excel and videos that were uploaded to the groups google drive.
- <u>Confirm results with interviewees</u>
 - Confirmed through email.
- Share information with stakeholders
 - All stakeholders attended the meeting.
- Schedule follow up interview if needed
 - o Not applicable

4.8.3 Document Analysis

4.8.3.1 Before Elicitation

We decided to schedule a meeting with the director of Gohvan Construction. The aim of the meeting was to gain insight into the processes of the organisation and that actual work that stakeholders needed to produce. We believe understanding how the company works before we recommend our solution is the best approach in being able to offer an effective and efficient solution.

Because many of the current business processes would be automated, taking time to look at what is already on paper, on a spreadsheet and how it is filled in could save us valuable time and help us to offer a valuable service. We chose Google Meet as a platform to have the meeting, for 30-45 minutes. We wanted to gather details of the TSS Report, Formal Site Drawing, Health and Safety files and the Snag List.

4.8.3.2 During Elicitation

All the reports requested were shown to us, starting with the TSS Report that is filled out on-site by the Operations Manager. It contains information specific to that project and to that site that need to be filled in. It is paper based, which can make reading difficult, it also contains notes written outside of the designated blocks which can lead to confusion. The formal site drawing is clear, easy to understand and helps us to get a better idea of the site and the required materials. The HS files that were shown are vast and compiled specifically for the client, and the snag list that was shown offers a look into the inspection of the site and notes on possible snags. Overall, the necessary information required is given but there is re-submission of details and a clear need to eliminate labour-intensive activities. Additional research in the form of interviews will be necessary.

4.8.3.3 After Elicitation

We decided that having a meeting with one of the employees (Health and Safety Officer) would be beneficial to gain better insight, as well as having a meeting with the Operations Manager to better understand how certain processes work on a day-to-day basis. We all agree that this will be an invaluable help in creating a system that solves the problems or improves on processes that they already have and not the ones that we assume they have. Problems are found under 4.1 and the actual documents under Appendix A.

4.9 Conclusion

This section provided a detailed overview of the problem, opportunities, assumptions, directives, and techniques used for elicitation. This assisted us in identifying business needs, as well as solutions that can be used to meet system objectives. Through brainstorming, interviews, and analysing documents we were given insightful knowledge into the processes of the business.

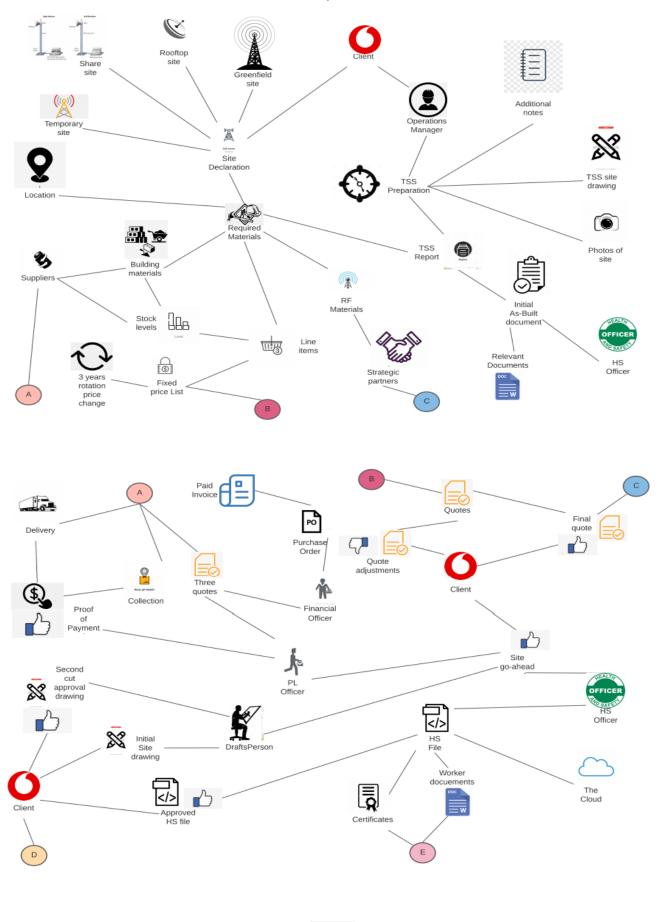

ALINÉAB

5. Problem Analysis

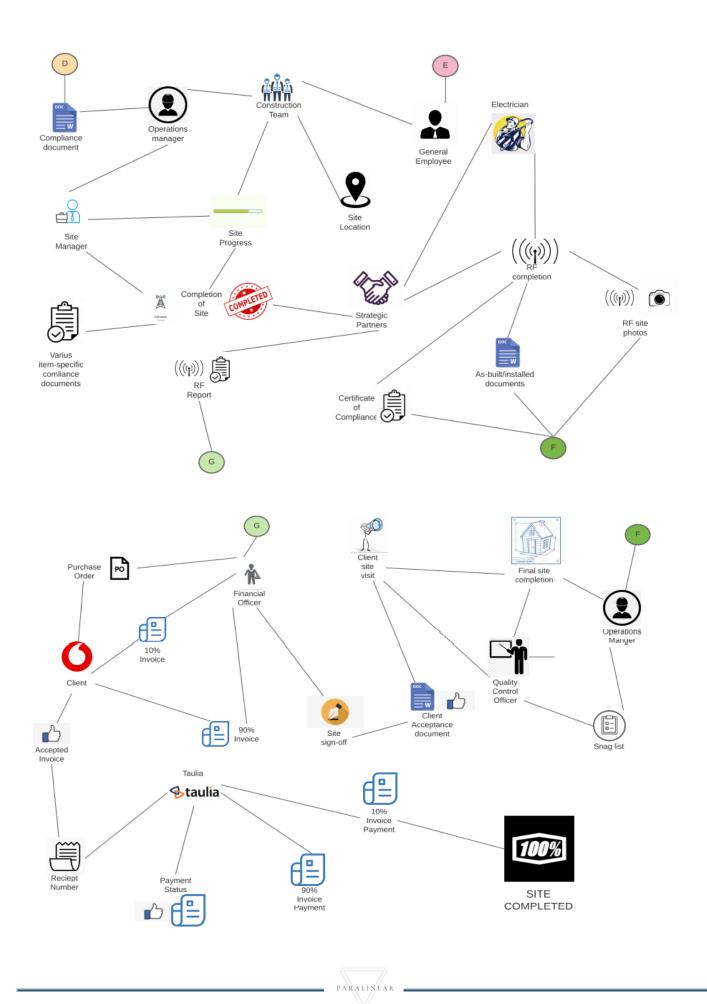

5.1 Introduction

In this problem analysis our team will look at an overview of the current system, it's activities and its current events by using a rich picture to discover the issues and failures that the current system has. This will allow us to get a better understanding of what needs to be improved. Through analysing the system requirements and the capability gaps we will be able to make adequate solutions to address the gaps in the current system and propose a new system that will meet all the system requirements.

RALINEAR

5.2 Current System Rich Picture

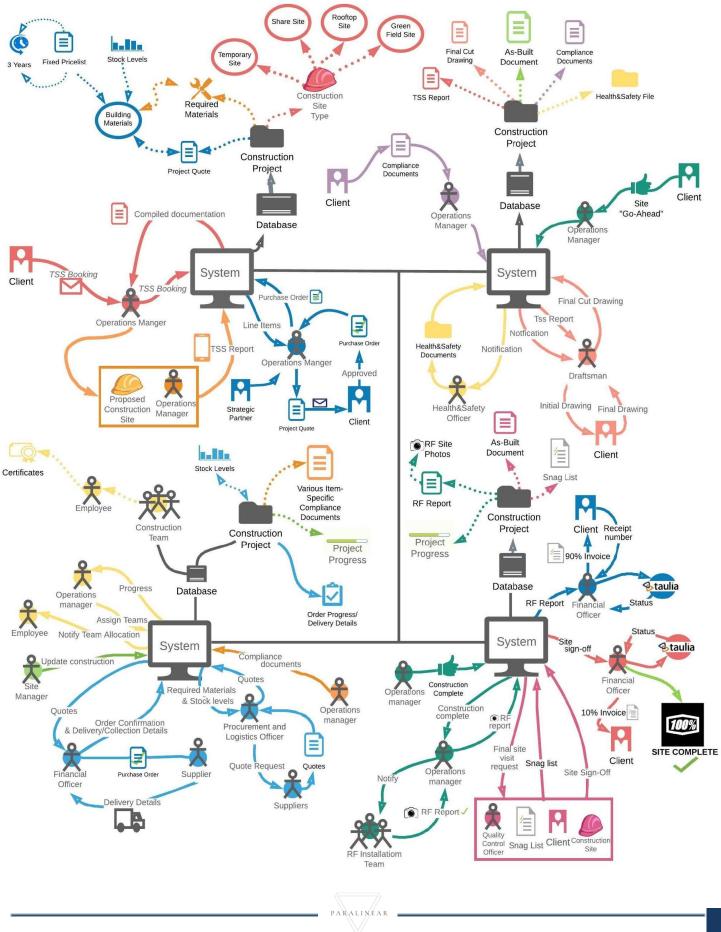

| No. | Current Capabilities | Required Capabilities | Capability gaps | Recommendations |
|-----|---|---|--|--|
| 1. | Manually handling TSS bookings via email. | Making bookings TSS through a system. | There is no system in place that can store bookings and manage bookings. There is no way to know which bookings were made without asking someone. | A system with the ability to create and manage bookings when a booking request is received. Users will be able to login and create and view bookings |
| 2. | The TSS report is filled out on paper. | Filling in a TSS report form on a tablet or smartphone. | Once a TSS report is drawn up it must be manually scanned in and mailed to all the parties involved. The form is often not filled in correctly because it is outdated. | A system which allows the user to fill in an updated TSS report form on their smart device and directly makes it available to the necessary parties and notifies them once it has been uploaded. |
| 3. | The TSS site photos are shared via WhatsApp. | Uploading the photos directly to a system and linking it with the corresponding project. | Sending images through WhatsApp and uploading it to the correct place is time consuming and not necessary. Photos do not always end up in the right place. | A system with the capability of uploading photos directly to projects and making it possible for all necessary parties to update and access it. |

5.3 System Capabilities and GAPS

| 5. | Purchase Orders are tracked and managed manually. | Upload purchase orders on a system and update the project status to "Purchase order received". | All the purchase orders are received manually and uploaded to One drive and | A system which will receive purchase orders and notify the operations manager and other necessary parties that the site |
|----|---|--|--|--|
| | | | people are notified of this via email. There is no system to notify employees that the project quote was approved. | construction can continue to the next step by updating the Project status to "Purchase order received." |
| 6. | An As-built document is compiled manually after the project is completed | A system generated As- built document. | There is no system in place for making an As- built document. The health and safety officer compiles the document after construction in a pdf editor. | A system that generates parts of the As-built document while the project is in progress. |
| 7. | The construction project's progress is tracked via WhatsApp. | Tracking construction progress through a system. | The current system is unreliable and unorganized. Asking for project updates is time consuming seeing as replies are not immediate. | A system which allows the user to update the progress of the site on their phones/tablets and allows the user to upload progress photos. The progress updates will be linked to the corresponding construction sites. |

| 8. | Site Allocation is done via email or WhatsApp. | A system that shows the workload of each team to better allocate teams to construction sites. | There is no system to manage and view the workload of construction teams. The operations manager must manually check what each team is doing before assigning teams to construction sites. | A system that tracks all construction teams' site allocations with site progress, and team workloads. The system will then allow the user to assign teams to new sites and the system will notify teams accordingly and allow them to accept or reject site allocation if a reason is given. |
|-----|---|---|---|---|
| 9. | Item stock levels are tracked on an excel spreadsheet. | Tracking item stock levels through a system. | There is no system for tracking item stock levels due to the company not carrying a lot of items on hand, but the current way of tracking items is not scalable. | A system that allows the user to add/update new items and store them in a database. |
| 10. | Employee health and safety certificates are managed manually. | A system that tracks employee certificates. | Employee certificates have expiry dates. There is no system in place to notify the human resource officer that the certificates have expired. | A system that allows the user to add/ update employees and attach their certificates to their records. The system will require the user to enter the certificate's expiry dates and will notify the human resource officer once the employees' certificates have expired. |

5.4 Proposed System Rich Picture

5.5 Conclusion

Through analysing the capabilities of the current system and looking at the system as a rich picture we were able to see the gaps of the system and identify the required capabilities to address the gaps. We were able to make recommendations to meet these required capabilities and depict it in a new rich picture of the proposed system.

RALINEAR

6. Requirement Analysis

6.1 Introduction

The requirement analysis process helps distinguish what functional and non-functional requirements the system must be able to do. Functional requirements must support the system user(s) in performing their task(s) correctly. Non-functional requirements are behavioural properties in which the system must adhere to.

6.2 Functional requirement list

| 1.Establishment Subsystem | |
|---------------------------|----------------------------------|
| 1.1 | Book TSS (Technical site survey) |
| 1.2 | Create TSS |
| 1.3 | Edit TSS |
| 1.4 | Upload Rough Drawing |
| 1.5 | Create Rough Drawing digitally |
| 1.6 | Upload TSS Site Photos |
| 1.7 | Update TSS Site Photos |
| 1.8 | Send TSS Report |
| 1.9 | Receive TSS report Confirmation |

| 2.Quotation Subsystem | |
|-----------------------|-------------------------|
| 2.1 | Create Quote |
| 2.2 | Update Quote |
| 2.3 | Search Quote |
| 2.4 | Generate Final Quote |
| 2.5 | Receive PO |
| 2.6 | Update PO status |
| 2.7 | Receive "Site-Go-Ahead" |

| 3.Administration Subsystem | |
|----------------------------|------------------------------------|
| 3.1 | Create HS File (Health and Safety) |
| 3.2 | Update HS File status |
| 3.3 | Upload HS File |
| 3.4 | Search HS File |
| 3.5 | Receive HS File Confirmation |
| 3.6 | Create Final Drawing |
| 3.7 | Accept/Reject Final Drawing |
| 3.8 | Upload Second Cut |
| 3.9 | Upload Compliance Documents |
| 3.10 | Generate As-Built Document |
| 3.11 | Update As-Built Document |
| 3.12 | Search As-Built Document |

| 4.Cor | 4.Construction Subsystem | |
|-------|---|--|
| 4.1 | Create Team | |
| 4.2 | Update Team | |
| 4.3 | Search Team | |
| 4.4 | Allocate Team Site | |
| 4.5 | Accept/Reject Team Site Allocation | |
| 4.6 | Update Team Site Allocation | |
| 4.7 | Search Team Site Allocation | |
| 4.8 | Assign Site Manager | |
| 4.9 | Update Site Manager | |
| 4.10 | Search Site Manager | |
| 4.11 | Create Site Progress status | |
| 4.12 | Update Site Progress status | |
| 4.13 | Search Site Progress status | |
| 4.14 | Site Construction Complete Notification | |
| 4.15 | Installation Complete Confirmation | |
| 4.16 | Request Final Site Visit | |
| 4.17 | Log Snags | |

| 4.18 | Update Snags |
|------|-----------------------------|
| 4.19 | Search Snags |
| 4.20 | Request Client Site visit |
| 4.21 | Update Client Site approval |
| 4.22 | Request site sign-off |
| 4.23 | Update site sign-off |
| 4.24 | Search site sign-off |

| 5.Invoicing Subsystem | |
|-----------------------|------------------------------|
| 5.1 | Receive Receipt Number |
| 5.2 | Generate Invoice |
| 5.3 | Receive Invoice Confirmation |
| 5.4 | Process Claim |
| 5.5 | Process Final Claim |

| 6.Human Resource Subsystem | |
|----------------------------|----------------------------|
| 6.1 | Add employee |
| 6.2 | Update employee |
| 6.3 | Search employee |
| 6.4 | Upload Employee documents. |
| 6.5 | Update Employee Document |
| 6.6 | Search employee document |

| 7.Supplier Order Subsystem | |
|----------------------------|-----------------------------|
| 7.1 | Generate line-item list |
| 7.2 | Update line-item list |
| 7.3 | Receive supplier quote |
| 7.4 | Update Final supplier quote |
| 7.5 | Create PO |

| 8.Supplier Subsystem | |
|----------------------|-----------------|
| 8.1 | Add supplier |
| 8.2 | Update supplier |
| 8.3 | Search supplier |
| 8.4 | Upload Docs |

| 9.Inventory Management Subsystem | |
|----------------------------------|---------------------------|
| 9.1 | Add line-item |
| 9.2 | Update line-item |
| 9.3 | Search line-item |
| 9.4 | Update Line-item quantity |

| 10.Report Subsystem | |
|---------------------|---------------------------------|
| 10.1 | Generate stock level report |
| 10.2 | Generate site progress report |
| 10.3 | Generate TSS Report |
| 10.4 | Generate RF report |
| 10.5 | Generate document expiry report |

| 11.User Management Subsystem | |
|------------------------------|------------------------|
| 11.1 | Log In |
| 11.2 | Register New Account |
| 11.3 | Log out |
| 11.4 | Update Account Details |
| 11.5 | Search Account |
| 11.6 | Change Password |
| 11.7 | Forgot Password |

6.3 functional requirement description and details

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 1.1 |
| Requirement name: | Book Technical Site Survey |
| Requirement short | This the process where a client books a Technical Site Survey (TSS) |
| description: | |
| Requirement detailed | The client sends an email to Gohvan Construction requesting to have a |
| description and | TSS on a possible location for a site and the operations manager sets a |
| constraints: | time and date with the client. |
| Business rules applicable | Operations manager can only manage TSS |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

6.3.1 Establishment subsystem

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 1.2 |
| Requirement name: | Create Technical Site Survey (TSS) |
| Requirement short | This is the process where the operations manager creates the TSS. |
| description: | |
| Requirement detailed | This is the process where the operations manager creates the TSS on the |
| description and | system so that the site's information can be entered. |
| constraints: | |
| Business rules applicable | Operations manager can only manage TSS |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 1.3 |
| Requirement name: | Edit Technical Site Survey (TSS) |
| Requirement short | This is the process where the operations manager edits the TSS. |
| description: | |
| Requirement detailed | This is the process where the operations manager edits the TSS on the |
| description and | system so that the site's information can be entered and corrected if |
| constraints: | needed. |
| Business rules applicable | Operations manager can only manage TSS |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 1.4 |
| Requirement name: | Upload Rough Drawing |
| Requirement short | This the process where the operations manager uploads a rough site |
| description: | drawing |
| Requirement detailed | This the process where the operations manager uploads a photo/pdf onto |
| description and | the system of a rough drawing of the site and project. |
| constraints: | |
| Business rules applicable | Operations manager can only upload a rough site drawing. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 1.5 |
| Requirement name: | Create Rough Drawing |
| Requirement short | This the process where the operations manager creates a rough drawing |
| description: | of the site. |
| Requirement detailed | This the process where the operations manager creates a rough site |
| description and | drawing on a tablet. |
| constraints: | |
| Business rules applicable | Operations manager can only create a rough site drawing. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 1.6 |
| Requirement name: | Upload TSS site photos |
| Requirement short | This the process where the operations manager uploads photos of the site |
| description: | |
| Requirement detailed | This the process where the operations manager uploads photos of the site |
| description and | to help complete the overall TSS |
| constraints: | |
| Business rules applicable | Operations managers can only upload TSS site photos. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 1.9 |
| Requirement name: | Received TSS Report Confirmation |
| Requirement short | This is the process where the operations manager receives confirmation of |
| description: | the TSS report. |
| Requirement detailed | This the process where the operations manager receives confirmation of |
| description and | the TSS report from the client that site goes ahead can happen. |
| constraints: | |
| Business rules applicable | TSS report confirmation needs to be received before site go ahead can |
| to this requirement | happen. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 2.1 |
| Requirement name: | Create Quote |
| Requirement short | The Operations Manager creates a quote from a fixed-price list. |
| description: | |
| Requirement detailed | The Operations Manager takes the line items from the TSS report and |
| description and | enters the required quantities on a fixed-price list. Calculation sheets with |
| constraints: | price calculations are submitted by strategic partners to enable |
| | centralized package pricing. |
| | Calculation sheets must be submitted by third-party companies. |
| Business rules applicable | Only the Operations Manager is allowed to compile the quote |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

6.3.2 Quotation subsystem

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 2.2 |
| Requirement name: | Update Quote |
| Requirement short | The Operation Manager makes changes to the quote. |
| description: | |
| Requirement detailed | The Operations Manager updates the necessary details of the quote |
| description and | before it has been finalized. This may include calculation updates sent by |
| constraints: | strategic partners. This will invoke requirement 2.3 Search Quote. |
| | Adjustments to the quotation after the final site "go-ahead" can be made. |
| Business rules applicable | Only the Operations Manager is allowed to update the quote and send it |
| to this requirement | to the client for confirmation. |
| | The fixed price list cannot be changed. |
| | All adjustments to the quote will result in an additional "copy" of the |
| | documents; Package Pricing, Final Quote, Purchase Order. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 2.3 |
| Requirement name: | Search Quote |
| Requirement short | The Operations Manager provides search criteria in order to find a quote |
| description: | on the system |
| Requirement detailed | The Operations Manager provides search criteria to search for a quote. |
| description and | The system will capture the search criteria and display the results. The |
| constraints: | Operations Manager will then select the quote he desired to search for. |
| Business rules applicable | Only the Operations Manager is allowed to search for a quote. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 2.4 |
| Requirement name: | Generate final quote |
| Requirement short | The Operations Manager finalizes the quote and sends it to the client |
| description: | |
| Requirement detailed | After all the applicable pricing has been finalized, the Operations |
| description and | Manager compiles the final quotation and submits it to the client in order |
| constraints: | for it to be approved |
| Business rules applicable | Only the Operations Manager is allowed to compile the final quote and |
| to this requirement | send it to the client for confirmation |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 2.5 |
| Requirement name | Receive Purchase Order |
| Requirement short | The Operations Manager receives a purchase order from the client |
| description: | |
| Requirement detailed | After the submitted quotation has been approved and the required |
| description and | budget has been allocated, the client then sends a Purchase order to the |
| constraints: | Operations Manager. |
| Business rules applicable | The quotation must be approved, and the required budget must be |
| to this requirement | allocated in order for it to be considered a Purchase Order. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 2.6 |
| Requirement name: | Update Purchase Order Status |
| Requirement short | The Operations Manager updates the status of the Purchase Order once |
| description: | the purchase order has been received from the client. (Another email |
| | may be sent to request confirmation that the work may commence) |
| Requirement detailed | After the purchase order is received, the Operations Manager updates |
| description and | the status of the purchase order on the system to "Received". |
| constraints: | |
| Business rules applicable | The purchase order must be received in order for it to be updated to |
| to this requirement | "Received". |
| | Only the Operations Manager can update this status. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 2.7 |
| Requirement name: | Receive Site "Go-Ahead" |
| Requirement short | The client communicates confirmation to the Operations Manager that |
| description: | the work may commence which is then sent to the relevant parties. |
| Requirement detailed | The client sends a final "go-ahead" to the Operations Manager via email |
| description and | which indicates that the work may commence. This is then sent to the |
| constraints: | Procurements and Logistics Officer, the Health and Safety Officer as well |
| | as the Draftsman. |
| Business rules applicable | Adjustments to the quotation can be requested which will result in a |
| to this requirement | "copy" of each of the documents; Package Pricing, Final Quote, |
| | Purchase Order. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.1 |
| Requirement name: | Create HS File |
| Requirement short | The HS Officer creates an HS File to be approved by the client |
| description: | |
| Requirement detailed | The HS Officer compiles various certificates and documents from the |
| description and | system database that is sent to the client via email for approval. |
| constraints: | |
| Business rules applicable | Only the HS Officer is allowed to compile the HS File to be sent to the |
| to this requirement | client. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

6.3.3 Administration subsystem

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.2 |
| Requirement name: | Update HS file status |
| Requirement short | The HS Officer updates the HS file status to either "Complete" or |
| description: | "Approved" |
| Requirement detailed | Once the HS File has been completed by the HS Officer or approved by |
| description and | the client, the status will be updated to "Complete" or "Approved" |
| constraints: | respectively on the system. This use case invokes requirement 3.4 |
| | Search HS File. |
| Business rules applicable | Only the HS Officer can update the status of the HS file. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.3 |
| Requirement name (use | Upload HS File |
| case name): | |
| Requirement short | The HS Officer uploads the appropriate HS File. |
| description: | |
| Requirement detailed | The HS Officer uploads the appropriate HS file to the system in order for |
| description and | there to be a record of it. |
| constraints: | |
| Business rules applicable | Only the HS Officer can upload the appropriate HS File. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.4 |
| Requirement name: | Search HS File |
| Requirement short | The HS Officer will provide search criteria in order to find the appropriate |
| description: | HS File. |
| Requirement detailed | The HS Officer provides search criteria to find the appropriate HS file. |
| description and | The System retrieves a list of HS files that match the criteria entered. |
| constraints: | The System then displays these HS files. |
| Business rules applicable | Only the HS Officer can search for HS Files. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.5 |
| Requirement name: | Receive HS File Confirmation |
| Requirement short | The client approves the HS File sent by the HS Officer sent via email. |
| description: | |
| Requirement detailed | The client approves the HS File sent by the HS Officer who then updates |
| description and | the HS File status to "Approved". |
| constraints: | |
| Business rules applicable | Only the HS Officer updates the HS File status. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.6 |
| Requirement name: | Create formal drawing |
| Requirement short | A Draftsman creates a formal drawing of the site which is then sent to |
| description: | the client for approval. |
| Requirement detailed | A Draftsman creates a formal drawing of the site referencing the |
| description and | drawings on the initial TSS Report. This drawing is then sent to the client |
| constraints: | for approval. |
| Business rules applicable | The formal drawing must be sent to the client for approval once |
| to this requirement | completed. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.7 |
| Requirement name: | Accept/Reject Drawing |
| Requirement short | The Draftsman receives approval or disapproval of the formal drawing of |
| description: | the client. |
| Requirement detailed | The formal drawing created by the Draftsman is approved by the client. A |
| description and | second cut drawing will then be obtained from the client. |
| constraints: | The formal drawing can be rejected by the client. The Draftsman will then |
| | create a new formal drawing, invoking the requirement 3.6 Create formal |
| | drawing. |
| Business rules applicable | A second cut drawing is only obtained if the initial drawing has been |
| to this requirement | approved. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.8 |
| Requirement name: | Upload Second Cut |
| Requirement short | The Draftsman uploads the second cut drawing to the system |
| description: | |
| Requirement detailed | The client sends a second cut drawing to the draftsman. This is then |
| description and | uploaded on the system by the draftsman. |
| constraints: | |
| Business rules applicable | Only the draftsman can upload the second cut drawing |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

PARALINEAR

52

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 3.9 |
| Requirement name: | Upload Compliance Documents |
| Requirement short | A Draftsman uploads compliance documents to the system |
| description: | |
| Requirement detailed | Compliance Documents are uploaded to the system to be sent to the |
| description and | client by the Draftsman. These help to solve problem and are used for |
| constraints: | future reference. |
| Business rules applicable | The uploading of compliance documents is not compulsory. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.10 |
| Requirement name: | Generate As-Built Document |
| Requirement short | The Operations Manager generates an as-built document that is then |
| description: | sent to an employee to compile the document. |
| Requirement detailed | An as-built document is generated that contains various reports and |
| description and | summaries pertaining to the specific site. An employee then compiles the |
| constraints: | document using PDF editing software. |
| Business rules applicable | The document must be compiled using PDF editing software. |
| to this requirement | |

| Revision number: | |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.11 |
| Requirement name: | Update As-Built Document |
| Requirement short | During the site build process, the as-built document is updated by the |
| description: | Operations Manager. |
| Requirement detailed | The Operations Manager updates the as-built document. This invokes |
| description and | requirement 3.12 Search As-Built Document. |
| constraints: | |
| Business rules applicable | Only the Operations Manager can update the as-built document. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 3.12 |
| Requirement name: | Search As-Built Document |
| Requirement short | The Operations Managers uses the system to search for as-built |
| description: | documents. |
| Requirement detailed | The Operations Manager enters search criteria for the as-built document |
| description and | into the search bar. The system then displays a list of as-built documents |
| constraints: | that match the search criteria that was retrieved. |
| Business rules applicable | Only the Operations Manager can search for the as-built document. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 4.1 |
| Requirement name: | Create Team |
| Requirement short | The system must allow the Operations Manager to create new teams on |
| description: | the system. |
| Requirement detailed | The Operations Manager must fill out a form that requires all the |
| description and | employee's details needed such as employee ID, Name, Surname, |
| constraints: | contact details that the operations manager wishes to be on the same |
| | team. This will then be submitted and a new team will be created in the |
| | database and system, A site manager can also be linked to the team if |
| | the Operations Manager desires, this will be an optional entry in the |
| | aforementioned form. |
| Business rules applicable | Only the Operations Manager can create new teams on the system. |
| to this requirement | Site Managers can suggest to the Operations Manager which employees |
| | they wish to have on a team. |

| Revision number: | |
| Criticality/Priority: | Critical |

| 6.3.4 | Construction Subsystem |
|-------|------------------------|
|-------|------------------------|

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 4.2 |
| Requirement name: | Update Team |
| Requirement short | The system must allow the Operations Manager to update teams and |
| description: | members within the teams. |
| Requirement detailed | The Operations manager will make use of the "Search Team" use case |
| description and | to search for the specific team the Operations Manager wishes to |
| constraints: | update. The Operations Manager will then update the Team details |
| | accordingly and submit the changes to the system. |
| Business rules applicable | Only the Operations Manager can update the teams on the system. |
| to this requirement | The Site Manager can suggest to the Operations Manager on the |
| | desired team updates. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 4.3 |
| Requirement name: | Search Team |
| Requirement short | The system must allow the user to search for a team. |
| description: | |
| Requirement detailed | The user must enter the details of the desired team for the search |
| description and | function to take place. The System then searches the database for the |
| constraints: | existing team and returns the team details once found. The search |
| | function will either require the user to search by team name, ID and Date |
| | created |
| Business rules applicable | None |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 4.4 |
| Requirement name: | Allocate Team Site |
| Requirement short | The system must allow the Operations Manager to assign a team to a |
| description: | construction site. |
| Requirement detailed | The Operations Manager will search for the team he wishes to allocate to |
| description and | a site. The Operations Manager will then select on the desired team and |
| constraints: | then link the team to the Construction site he desires the selected team |
| | to work at. The system will then ask for a confirmation for the allocated |
| | team and link the construction site to the Team accordingly. |
| Business rules applicable | Only the operations manager can allocate a team to a site. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 4.5 |
| Requirement name: | Accept/Reject Team Site Allocation |
| Requirement short | The system must allow the options for the allocated Site Manager to |
| description: | accept or reject the team site allocation. |
| Requirement detailed | The selected team must accept or reject the offer to link to a desired |
| description and | construction site as they could already be working on a construction site |
| constraints: | at the time of allocation. The Teams Site Manager will be logged onto the |
| | system to receive the notification on the allocation to the construction site |
| | and navigate to the accept or reject option to then be allocated to the |
| | aforementioned construction site. |
| Business rules applicable | A team can only be assigned to one construction site |
| to this requirement | Only a site manager can accept or reject a site allocation |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |

6.3.5 Invoicing subsystem

| Functional | Explanation |
|----------------------|---|
| Requirement | |
| Requirement number: | 5.2 |
| Requirement name: | Generate Invoice |
| Requirement short | The system must allow the Financial Officer to create an Invoice from the |
| description: | aforementioned claimed receipt number |
| Requirement detailed | The Financial Officer uses the received receipt number to create a |
| description and | correlation invoice relating to the construction site and project requested |
| constraints: | initial by the client. The invoice is then submitted to the third-party |
| | website "Taulia". Taulia then processes the payment relating to the |
| | submitted invoice. The invoice then goes through multiple stages within |
| | Taulia, once the invoice hits a certain stage within the Taulia website the |

| | Financial Officer is then notified on the payment made to Gohvan |
|---------------------------|--|
| | Construction. |
| Business rules applicable | The amount for specific invoice must be paid within 7 – 10 days. |
| to this requirement | Various client parties must approve the payment before Gohvan can be |
| | paid invoice amount. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 5.3 |
| Requirement name: | Receive Invoice Confirmation |
| Requirement short | The system must allow the Financial Officer to receive invoice |
| description: | confirmation of payment. |
| Requirement detailed | The Financial Officer receive the confirmation that the invoice has been |
| description and | paid from the Taulia app and update the system accordingly that the |
| constraints: | payment has been paid out to Govan construction and the claim use |
| | case will be updated accordingly whether it is for the initial 90% claim or |
| | the final 10% claim. |
| | if the confirmation for the final 10% claim is confirmed then the Financial |
| | Officer update the initial project as finished on the system indicating that |
| | there are no more steps required in completing the project request |
| | initially made by the customer. |
| | If the confirmation for the 90% claim is received, then the Financial |
| | Officer needs to update the system accordingly and update the system to |
| | wait for the site sign-off to be made by the customer and the site |
| | progress to be updated to then start the use case to claim for the final |
| | 10% from the client. |
| Business rules applicable | The 10% claim has to be confirmed paid for the Financial Officer to |
| to this requirement | declare that the initial project requested is completed. |
| | The Financial Officer is the only user on the system that can process and |
| | claim the invoices to and from the client for payments. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 5.4 |
| Requirement name: | Process 90 % Claim |
| Requirement short | The system must allow the Financial Officer to claim the 90% payment |
| description: | from the client. |
| Requirement detailed | Once the Financial Officer receives the RF report from the Operations |
| description and | Manager and Site Manager then the process to claim the 90% claim from |
| constraints: | the client can be submitted manually. The 90% claim status will be |
| | updated accordingly to represent that the claim has been made and |
| | receipt number is being awaited. |
| Business rules applicable | RF report has to be received and up to date. |
| to this requirement | |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 5.5 |
| Requirement name: | Process final 10% Claim |
| Requirement short | The system must allow the Financial Officer to claim the 10% payment |
| description: | from the client. |
| Requirement detailed | Once the Financial Officer receives the site sign-off from the Operations |
| description and | Manager, Quality Control Officer and client from the site visit and the |
| constraints: | commissioning report is received. Only then can the process to claim the |
| | final 10% claim from the client can be submitted manually. The 10% |
| | claim status will be updated accordingly to represent that the claim has |
| | been made and receipt number is being waited for the final payment |
| | needed for the completion of the initial requested project from the client. |
| Business rules applicable | Site sign-off must be approved before final claim. |
| to this requirement | Commissioning report (As-built documents) must be submitted and |
| | created before final claim can be made to the client. |
| Revision date and | 08-04-2021 Version 1.0 |
| Revision number: | |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 6.1 |
| Requirement name: | Add new employee |
| Requirement short | The system must allow the user to add a new employee. |
| description: | |
| Requirement detailed | The user fills out a form that requires all employee details, including name, |
| description and | surname, cell number, ID/Passport number, tax number, home |
| constraints: | address/postal address and email address must be filled in before an |
| | employee can be added to the system. |
| Business rules applicable | Only the Human resource officer can add new employees to the system. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

6.3.6 Human Resource subsystem

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 6.2 |
| Requirement name : | Update Employee |
| Requirement short | The system must allow the user to update an existing employee record. |
| description: | |
| Requirement detailed | The user searches for the employee they want to update. Once the |
| description and | employee is found the user can update the employee's details. The |
| constraints: | system must allow the user to update all employee details. |
| Business rules applicable | Only the Human resource officer can update the employees on the |
| to this requirement | system. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 6.3 |
| Requirement name: | Search Employee |
| Requirement short | The system must allow the user to search through the list of existing |
| description: | employees. |
| Requirement detailed | The Human resource manager wants to search for an employee. The user |
| description and | can search for an employee by name or Employee ID. All the employees' |
| constraints: | details need to be displayed when an employee is searched. |
| Business rules applicable | None. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 6.4 |
| Requirement name: | Upload employee documents |
| Requirement short | The system must allow the user to upload employee documents to the |
| description: | system. |
| Requirement detailed | The user can attach the employee's certifications and health and safety |
| description and | certificates to the employee's file. |
| constraints: | |
| Business rules applicable | Only the Human resource officer can update the employees on the |
| to this requirement | system. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 6.5 |
| Requirement name: | Update employee documents |
| Requirement short | The system must allow the user to update employee documents. |
| description: | |
| Requirement detailed | Certain employee certificates expire and need to be tracked and updated |
| description and | accordingly. The user must be able to search for specific |
| constraints: | documents/certificates and replace expired certificates with new |
| | certificates |
| Business rules applicable | Only the Human resource officer can update the employees on the |
| to this requirement | system. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 6.6 |
| Requirement name: | Search employee documents |
| Requirement short | The system must allow the user to search through the list of existing |
| description: | employee's documents. |
| Requirement detailed | The Human resource manager wants to search for an employee's existing |
| description and | documents. The user can search for an employee document by finding the |
| constraints: | employee and searching for the document by name or document code. |
| | The documents related to search must be displayed and the system must |
| | allow the user to access the documents. |
| Business rules applicable | None |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low Priority |

| Functional Requirement | Explanation |
|---------------------------|--|
| | |
| Requirement number: | 7.1 |
| Requirement name: | Generate line-item list. |
| Requirement short | The system must generate a line-item list for the current project. |
| description: | |
| Requirement detailed | When requested the system must generate a list of all the line items that a |
| description and | project will require. This list will depend on what type of construction site it |
| constraints: | is and what line items the operations manager listed on the TSS report |
| | form. The user will use this list to generate quote requests that will be sent |
| | to suppliers. |
| Business rules applicable | Only the operations manager must be able to request the line-item list. |
| to this requirement | The line-item list must include the set items that are required for each |
| | construction site type. |
| | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

6.3.7 Supplier Order subsystem

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 7.2 |
| Requirement name: | Update Item List |
| Requirement short | The system must allow the user to update the line-item list. |
| description: | |
| Requirement detailed | The user must be able to update the line-item list to add or remove any |
| description and | items that are or are not needed for the specific site. |
| constraints: | |
| Business rules applicable | Only the operations manager must be able to Update the line-item list. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 7.3 |
| Requirement name (use | Receive supplier quote |
| case name): | |
| Requirement short | The system must allow the user to add the supplier quotes that are |
| description: | received. |
| Requirement detailed | The system must allow the user to add 3 supplier quotes per item so that |
| description and | the user can compare between quotes and choose the best option. |
| constraints: | |
| Business rules applicable | Only the operations manager and the financial officer must be able to |
| to this requirement | upload received supplier quotes. |
| | There must be at least 3 quotes for each line item (each quote can have |
| | multiple line items). |
| | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 7.4 |
| Requirement name: | Update final supplier quote |
| Requirement short | The system must allow the user to select a final supplier quote. |
| description: | |
| Requirement detailed | After the financial officer has chosen a final supplier quote out of the three |
| description and | received supplier quotes the system must allow the user to select the final |
| constraints: | quote. The system must then show which quotes were rejected and which |
| | quotes were accepted. |
| Business rules applicable | Only the financial officer must be able to update the received supplier |
| to this requirement | quotes. |
| | There must be at least 1 accepted quote for each line item (each quote |
| | can have multiple line items). |
| | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 7.5 |
| Requirement name: | Create Purchase Order |
| Requirement short | The system must allow the user to add a purchase order. |
| description: | |
| Requirement detailed | After a quote is accepted the Financial officer will create a purchase order |
| description and | that will be sent to the supplier. The purchase order must be added to the |
| constraints: | system and linked to the appropriate construction project. |
| Business rules applicable | Only the financial officer must be able to create a purchase order. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 8.1 |
| Requirement name: | Add Supplier |
| Requirement short | The system must allow the user to add a new supplier. |
| description: | |
| Requirement detailed | The user must fill out a form that requires all supplier details, including the |
| description and | supplier's name, supplier type, phone number, payment details, business |
| constraints: | address, and email address must be filled in before a supplier can be |
| | added to the system. |
| Business rules applicable | Only the financial officer must be able to add new suppliers |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |

| | 6.3.8 | Supplier Subsystem |
|--|-------|--------------------|
|--|-------|--------------------|

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 8.2 |
| Requirement name: | Update Supplier |
| Requirement short | The system must allow the user to update a supplier's details. |
| description: | |
| Requirement detailed | The user searches for the supplier they want to update. Once the supplier |
| description and | is found the user can update the supplier's details. The system must allow |
| constraints: | the user to update all supplier details. |
| Business rules applicable | Only the financial officer must be able to add new suppliers. |
| to this requirement | All supplier details must always be up to date. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 8.3 |
| Requirement name: | Search Supplier |
| Requirement short | The system must allow the user to add a new client. |
| description: | |
| Requirement detailed | The Financial officer wants to search for a supplier. The user can search |
| description and | for a supplier searching for the supplier by name, type, or location. The |
| constraints: | suppliers related to search must be displayed. |
| Business rules applicable | None. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 8.4 |
| Requirement name: | Upload supplier documentation |
| Requirement short | The system must allow the user to upload all relevant supplier |
| description: | documentation. |
| Requirement detailed | The user must be able to add the relevant supplier documentation to the |
| description and | system and link it to the relevant supplier |
| constraints: | |
| Business rules applicable | None |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

| 6.3.9 | Inventory Management subsystem |
|-------|--------------------------------|
|-------|--------------------------------|

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 9.1 |
| Requirement name: | Add line-item |
| Requirement short | The system must allow the user to new line-items. |
| description: | |
| Requirement detailed | The user must be able to add a new line-item to the system. The line-item |
| description and | details include name, type, site type and suppliers. |
| constraints: | |
| Business rules applicable | Only the operations manager must be able to add new line-items. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 9.2 |
| Requirement name: | Update line-item |
| Requirement short | The system must allow the user to update line-items. |
| description: | |
| Requirement detailed | The user searches for the line-item they want to update. Once the line- |
| description and | item is found the user can update the line-item's details. The system must |
| constraints: | allow the user to update all line-item details. |
| Business rules applicable | Only the operations manager must be able to update existing line-items. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 9.3 |
| Requirement name: | Search line-item |
| Requirement short | The system must allow the user to add a new client. |
| description: | |
| Requirement detailed | The user wants to search for an existing line-item. The user can search for |
| description and | a line-item by searching for the line-item by name, item type, site-type, or |
| constraints: | supplier. The line-items related to search must be displayed and the |
| | system must allow the user to access the documents. |
| Business rules applicable | None. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 9.4 |
| Requirement name: | Update line-item quantity |
| Requirement short | The system must allow the user to update the line-item quantity. |
| description: | |
| Requirement detailed | The user must be able to update the quantity of line-items needed that is |
| description and | determined by the size of the site and type of site. |
| constraints: | |
| Business rules applicable | Only the operations manager must be able to update existing line-items |
| to this requirement | quantity. |
| | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

6.3.10 Report Subsystem

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 10.1 |
| Requirement name: | Generate stock level report |
| Requirement short | The system generates a report with the line items and their quantities. |
| description: | |
| Requirement detailed | The system will receive a request to generate the stock level report. The |
| description and | system will retrieve the necessary line items and their current stock |
| constraints: | levels from the database. Using this information, the system exports a |
| | document to the user. |
| Business rules applicable | Only the management team will have access to generating reports. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 10.2 |
| Requirement name: | Generate site progress report |
| Requirement short | The system generates a report with the sites and their associated |
| description: | progress status. |
| Requirement detailed | The system receives a request to generate site progress report. The |
| description and | system will retrieve the necessary Site details and their associated |
| constraints: | progress statuses. from the database. Using this information, the system |
| | exports a document to the user. The document summarises the site |
| | requirements. |
| Business rules applicable | Only the management team will have access to generating reports |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 10.3 |
| Requirement name: | Generate TSS Report |
| Requirement short | The system generates the Technical Site Survey report. This report |
| description: | contains all information gathered after the technical site survey is |
| | completed. |
| Requirement detailed | The system receives a request to generate Technical Site Survey report. |
| description and | The system will retrieve the necessary Site details, line items required, |
| constraints: | additional notes and drawings from the database. Using this information, |
| | the system exports a document to the user. |
| Business rules applicable | Only the Operations Manager has access to generate an TSS Report. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 10.4 |
| Requirement name: | Generate RF report |
| Requirement short | The system generates the RF report. |
| description: | |
| Requirement detailed | The system receives a request to generate an RF report. The system will |
| description and | retrieve the necessary Site detail and RF installation details. Using this |
| constraints: | information, the system exports a document to the user. The document |
| | allows the Financial Officer to begin the invoicing process. |
| Business rules applicable | Only the Operations Manager has access to generate an RF report. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 10.5 |
| Requirement name: | Generate document expiry report |
| Requirement short | The system generates a report that shows the employees' documents |
| description: | and their associated expiry dates. |
| Requirement detailed | The system will generate a report for the Human Resources Officer in a |
| description and | timely manner. This report contains a list of employees with their |
| constraints: | certifications and training qualifications and their respective expiry dates. |
| | This helps the Human Resources Officer stay up to date with the |
| | required certifications and qualifications for the company's employees. |
| Business rules applicable | Only the Human Resources Officer will have access to generating |
| to this requirement | reports |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Moderate |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 11.1 |
| Requirement name: | Log in |
| Requirement short | The process of user accessing the system. |
| description: | |
| Requirement detailed | The user enters their details to access the system which entails entering |
| description and | their own personal username and password. All this needs to be entered |
| constraints: | in order for users to access the system. |
| Business rules applicable | Employees need to be logged in before they can interact with the system. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Critical Priority |

6.3.11 User Management Subsystem

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 11.2 |
| Requirement name: | Register New Account |
| Requirement short | The process of creating a new account for a user. |
| description: | |
| Requirement detailed | The user goes through a process of creating an account by which they |
| description and | need to create a unique username and password for their account. |
| constraints: | |
| Business rules applicable | The username and password needs' to be business appropriate. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Moderate Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 11.3 |
| Requirement name: | Log out |
| Requirement short | The process of a user logging out of the system. |
| description: | |
| Requirement detailed | The process of a user logging out of the system so that the system cannot |
| description and | be accessed anymore unless a user logs in. |
| constraints: | |
| Business rules applicable | Once a user is done working on the system, they need to log out to ensure |
| to this requirement | security. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Medium Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 11.4 |
| Requirement name: | Update Account Details |
| Requirement short | User updates any account details that have changed or are incorrect. |
| description: | |
| Requirement detailed | The user can update information regarding their account details on the |
| description and | system for example email, name or surname, phone number etc. |
| constraints: | |
| Business rules applicable | Updating only information that has changed or is incorrect does not alter |
| to this requirement | correct information. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 11.5 |
| Requirement name: | Search Account |
| Requirement short | The process of a user searching for a specific account. |
| description: | |
| Requirement detailed | The process of a user searching for a Human resources and management |
| description and | staff searching for a specific user's account. |
| constraints: | |
| Business rules applicable | Only authorised users are allowed to search for accounts. |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low Priority |

| Functional | Explanation |
|---------------------------|--|
| Requirement | |
| Requirement number: | 11.6 |
| Requirement name: | Change Password |
| Requirement short | The process of a user changing their password. |
| description: | |
| Requirement detailed | The process of a user changing their password due to them forgetting their |
| description and | old password. The user does need access to their system account email |
| constraints: | to change their password. |
| Business rules applicable | Only the user of the account can change the password or the Human |
| to this requirement | Resources manager. |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Low Priority |

| Functional | Explanation |
|---------------------------|---|
| Requirement | |
| Requirement number: | 11.7 |
| Requirement name: | Forgot Password |
| Requirement short | The user forgot their password. |
| description: | |
| Requirement detailed | Starts the process of changing the user's password that they have |
| description and | forgotten. |
| constraints: | |
| Business rules applicable | Only the user of the account can select forgot password |
| to this requirement | |
| Revision date and | 08/04/2021 |
| Revision number: | Version 1.0 |
| Criticality/Priority: | Moderate Priority |

6.4 User acceptance criteria

The user acceptance criteria help determine the priority status of specific requirements. These statuses show how important the requirement is to the company's business processes.

Critical: This requirement is of critical importance for the competition of the necessary business processes. Without this requirement the system will not be able to perform vital business functions that support the business's objective and goals.

Moderate: This requirement has a moderate impact on the competition of the necessary business processes. Without this requirement the system the business would still be able to perform the vital business functions. However, without this requirement, there are potential issues such as extended turn-over times or discrepancies in data integrity.

Low: This requirement has a little to no impact on the competition of the necessary business processes. Without this requirement, the vital business functions will not be hindered. This requirement adds additional functionality to the system to assist achieving the business objectives.

6.5 Non-functional requirement list

| Requirement | Explanation |
|--------------------------|---|
| Requirement name: | Automation |
| Requirement short | The system should eliminate repetitive labour-intensive value |
| description: | chain activities by automating as many processes as possible. |
| Requirement Type: | Non-Functional |
| Details and Constraints: | The system should make use of automation to streamline Gohvan Construction's business processes. The system should automate repetitive tasks, this will improve turnaround time. |
| Revision date & Revision | 08-04-2021 Version 1.0 |
| number: | |
| Criticality/Priority: | Critical |

| Requirement | Explanation |
|----------------------------------|---|
| Requirement name: | Data integrity |
| Requirement short | The system should help reduce the user made errors in the |
| description: | company. By using data validation to verify the data integrity. |
| Requirement Type: | Non-Functional |
| Details and Constraints: | Preventing user made errors will ensure the correct data and data types are stored. Reducing garbage in garbage out. The system should limit or eliminate the amount user inputted data. The system should have data validation and verification checks. The system should avoid redundancy and duplication. The data needs to be accessible to the relevant parties. |
| Revision date & Revision number: | 08-04-2021 Version 1.0 |
| Criticality/Priority: | Critical |

| Requirement | Explanation |
|--------------------------|--|
| Requirement name: | Digitisation |
| Requirement short | The system should help digitize some of the company's paper |
| description: | documents. |
| Requirement Type: | Non-Functional |
| Details and Constraints: | • The system should be able to implement digital based forms rather than the current legacy paper-based forms. |

6.6 Conclusion

After performing the requirement analysis depth. We have determined the necessary functional and non-functional requirements for Gohvan Construction. Identifying the requirements has helped provide a broad overview of the company's use cases and subsystems.

RALINEAR

7. Feasibility/Decision Analysis

7.1 Introduction

The feasibility analysis consists of the purpose, background, scope, and structure. The feasibility analysis investigates the capabilities of the alternative candidates and the proposed system. Performing the analysis helps compare the feasibility of each candidate with regards to business needs of Gohvan Construction.

7.1.1 Purpose

The purpose of the feasibility analysis is to compare possible solutions to the business problem Gohvan Construction is experiencing. To determine the best candidate to suit the business requirement.

7.1.2 Background

The feasibility analysis is divided into 4 sections namely: operational, technical, economic and schedule feasibility. These sections are assigned a weight. These weights are based on the specific business needs that should be addressed. After a section's investigation is completed, a score is assigned to the candidates for each section. Once all sections are done, the scores are multiplied to the associated weights to get to the final score. These final scores are compared, and the best score helps determine which candidate should be selected.

7.1.3 Scope and structure

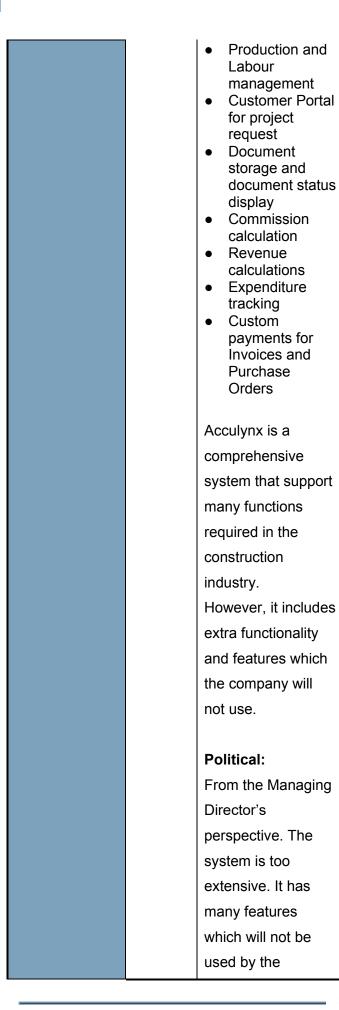

The feasibility is divided into the below structure.

- **Operational feasibility:** Investigates to what extent the candidate's system will support the business functions of Gohvan Construction.
- **Technical feasibility:** Investigates the technologies necessary to support the candidate's system.
- Economic feasibility: Investigates the economic impact each candidate presents if their solution is implemented. All associated costs such as cost to develop, payback period, net present value and calculations.
- **Schedule feasibility:** Investigates the time required to implement the candidate's system to a working condition. Where it is able to support the business functions Gohvan Construction.

7.2 Feasibility Analysis

Buildertrend caters for majority of the features required by Gohvan Construction.

Political:

From the Managing Director's perspective, the missing functionality will impact business functions.

From the Health and Safety Officer's perspective. The system's online storage and file management features will automate tedious repetitive document uploading and storing. will be tailored to suit the business's functions.

Political:

From the Managing Director's perspective. The system will introduce much needed automation. Therefore, the required turnaround time for their project will be reduced.

From the Operations Managers perspective. The system will be able to assist streamline his day-to-day tasks. However, he will require training to be able to utilize the system's full potential.

Figure 7.3: Calculations for candidate 3

| Feasibility | Recommendation |
|-------------------------|---|
| | |
| | |
| Operational feasibility | Candidate 1 and 2 scored lower than candidate 3. This is |
| | because candidate 3 is a tailor-made system to support |
| | Gohvan Construction's business functions. Candidates 1 and 2 |
| | have features which will not be used by the company |
| Technical feasibility | All three candidates require similar technologies to be utilise |
| | the full potentials of these systems. Such as mobile devices, |
| | laptops and/or desktops and access to the internet. |
| Economic feasibility | Candidate 3 excelled in this section as the proposed system |
| | has the lowest cost. Candidates 1 and 2 scored poorly, |
| | because these systems require monthly subscription to access |
| | the system. |
| Schedule feasibility | Candidates 1 and 2 scored higher than candidate 3. This is |
| | since candidates 1 and 2 are pre-built systems. Candidate 3 |
| | needs to be designed and developed. |
| Candidate | Candidate 3 scored the best overall weight ranking with a final |
| Recommendation: | score of 84.5 out of 100. |

7.3 Recommendations

7.4 Conclusion

In conclusion, after comparing the different systems, using the feasibility analysis we are able to recommend a system to Gohvan Construction. The system is recommended based on the final weighted scores in the feasibility matrix. These scores help determine whether a system fulfils required business functions. After completing the feasibility analysis. We are able to recommend Paralinear Solutions' proposed system.

8. Appendix A: Client Documentation

8.1 Introduction

Appendix A consists of the documentation that Gohvan Construction uses in their current system. We will use this documentation to better understand what information flows in and out of the system and how certain events are documented.

8.2 The TSS report

After a TSS booking is received via email the physical TSS takes place on-site where the applicable parties converse to decide on the required hardware and material needed for the specific site. Afterwards the TSS report is filled out on-site by the operations manager where additional notes and drawings are made the client for approval.

8.3 The Formal Site Drawing

After receiving the Site "Go-Ahead" a Draftsman creates a formal drawing of the site referencing the drawings made on the initial TSS Report. The drawing is then sent to the client for approval.

8.4 Health and Safety File

Before construction can commence, a health and safety file has to be submitted by the company's HS officer for approval by the client. The Health and safety folder is uploaded to One drive and the link is shared with the client.

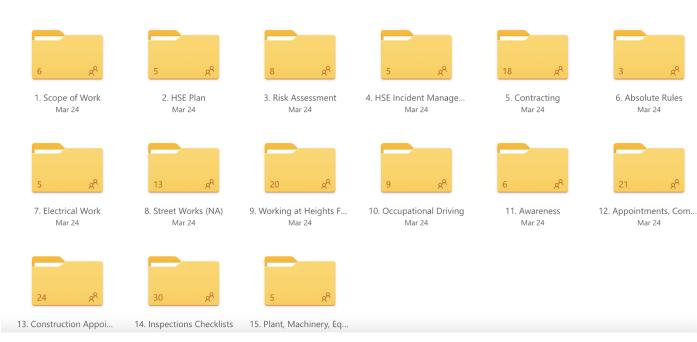

Figure 8.14: Example of One Drive Health and Safety folder.

8.5 Conclusion

After looking at all the documentation that Gohvan Construction gave us we now have a better understanding of how information flows within the business and how to incorporate it into our own system.

9. Appendix B: Other Systems Investigated

9.1 Introduction

This section contains all information of the existing researched systems that could be integrated and implemented into the Gohvan Construction system. These systems were mentioned in Section 7 (Feasibility analysis), all existing systems researched can help solve the business problems identified within the daily functions of Gohvan Construction. The Literature study will specify the details on the existing systems as well as the functions offered if the systems are implemented into the business.

9.2 Literature Study

9.2.1 Acculynx

The system "Acculynx" is a pre-existing software that is designed to help businesses streamline the construction process and simplify all functionalities. Acculynx offers the operation/construction company one fully cohesive all-in-one business system. The system was designed specifically for construction project management companies. Not only does Acculynx provide functions for construction project management, Acculynx also provides customer relationship management. Acculynx was established and developed in 2008.

Features:

- Customer Relationship Management (CRM)
- Captures photos of site
- Shareable photos with organisation
- Acculynx provides a custom database for all storage needs
- Builds estimates automatically (add in custom materials and measurements as well as own pricing for profits)

- Custom APIs
- Project management
- Project site/s progress
- Material Ordering (through Acculynx, no need to deal with suppliers personally)
- Production and Labour management
- Customer Portal for project requests
- Document storage and document status display
- SmartDocs and ReportsPlus (Can create custom reports)
 - Create custom reporting templates
 - Automation of document population
 - Artificial Intelligence and smart learning for reporting
 - Legal contracts can be created
 - Can cater to all documentation needs
 - Save all reports and documentation to database
- Commission calculation
- Revenue calculations
- Expenditure tracking
- Custom payments for Invoices and Purchase Orders
- CrewApp (Mobile Field App for Android and IOS)
 - o Daily schedule/assignments and logging abilities

- o Instant feedback and support for site construction
- o Instant access to needed data for details on construction site
- History of project transactions
- Share and store photos
- communication
- o Capture customer and operations manager signatures
- $_{\circ}$ Site directions
- AccuPay (General accounting system software provided for online payment)
 - Notifications when customer pays
 - Custom payment requests
 - Email linking and automation
 - Automation to job payments
 - Payment request tracking
 - Notifications on behind payments

Pricing:

The company wishing to adopt Acculynx will have to communicate with directly via a Acculynx consultant to determine a custom pricing strategy depending on the company's size and annual revenue.

Figure 9.1: Calculations for candidate 1

9.2.2 Buildertrend

Buildertrend is an existing web-based system used to store, process, and optimize daily operations and general construction site progress communication between the company and client (all applicable parties)

<u>Features:</u>

- Sales process between company and customer
 - o Automation of notifications and emails
 - o Deadlines and reminders on project quotas
 - Import/export excel formats
 - Create templates for documentation
 - o Can obtain digital signals
 - Custom quotations (applicable to customer needs)
- Project management for construction projects and daily business operations
 - Daily performance monitor
 - Notifications can be automated to time
 - Create Gant charts
 - Attachable documents and photos for necessary processes within businesses
 - Task assigning
 - Custom project scheduling
 - Syncs with Google/Apple services
 - o Online/cloud storage of necessary documents
 - File sharing within company and stakeholders
 - Construction site progress reports
 - Additional stakeholder additions (subcontractors/Strategic partners)

- Employee management
- Financial assistance
 - Invoicing features relating to customer needs
 - o Custom Purchase Orders
 - Payment processing
 - Payment Automation
 - Account budgeting
 - Purchase Order auditing / transaction management
 - Financial status
 - Approval of transactions made easy
 - Automated financial reports
- Customer relationship management
 - Custom leads on projects
 - Import existing excel formats for processing
 - o IOS and Android App for effective communication
 - Custom emails
 - Customer communication

Pricing:

- Core system \$99 a month
 - Task Scheduling
 - Daily tasks
 - Communication in and outside of business
 - Client login
- Pro system \$299 a month
 - Task Scheduling
 - o Daily tasks
 - Communication in and outside of business
 - Client login
 - Warranties on system
 - Custom surveys
 - Order changing and customizes
- Premium
 - Contact Buildertrend for custom quotation on pricing for implementing system according to business needs.

Figure 9.2: Calculations for candidate 2

9.3 Conclusion

The existing systems that have been researched by our team can be implemented and integrated into Gohvan Construction to solve the necessary business problems priorly mentioned. Although these systems do not cater to all the business problems Gohvan Construction are facing, they do provide a larger understanding of how to approach the problems and adding extra features and functionality to the business solution system our team is building for Gohvan Construction. Acculynx is a great overall system yet there are many features and functions not needed for the system at hand. Buildertrend is a considerably basic web-based system that covers a lot of the needed features but at sub-par standards therefore making them a very inefficient system to consider for implementation. The Invoicing system from both researched systems are not needed as Taulia is the main third-party software Gohvan Construction is using as required by the main client (Vodacom) for the existing and proposed system.

10. Appendix C: Complexity

10.1 Introduction

The complexity marks document indicates the level of complexity the proposed system for Gohvan construction will have and feature. All the required complexity marks listed must achieve a total score of above 150 points for a five-man team and must be maintained throughout the project lifecycle and finished product.

| Торіс | Level | | | |
|-----------------------|--|--|-----|----|
| | | | MAX | K |
| | For online applications: Responsive web design For desktop applications: Form design according to design principles (Schneiderman's golden rule on navigation applies here) | | 3 | |
| | Appropriate use of grids/tables | | 3 | |
| | Appropriate use of tabs/links | | 3 | |
| | Use of graphs in an appropriate business context | | 4 | |
| | The storage and display of graphical information, like photos with a good business reason | | 3 | |
| | Working e-mail automatically generated from the database in an appropriate business context | | 2 | |
| 1. Special | SMS messages automatically generated from the system in an appropriate business context | | 2 | 42 |
| GUI | Extensive user-friendly search facility | | 3 | 42 |
| | At least one use of a tree to display data from the database | | 3 | |
| | Able to dynamically modify a data tree structure and in doing so adjusting the data in the database At least one use of a calendar view of data (not a date/time picker; not a plug-in such as Google calendar) | | 4 | |
| | | | 3 | |
| | Uploading a file into the system with appropriate business reason | | | |
| | The use of audio/video in an appropriate business context | | 3 | |
| | At least one use of an administrator configurable timer in an appropriate business context | | 3 | |
| | At least 30 tables used (4 member groups) or 40 tables used (5 member groups) | | 6 | |
| 2. Database access | Full referential integrity on all tables | | 6 | 15 |
| | At least one use of master-detail table relationships (Schneiderman's golden rule on system status applies here) | | 3 | |
| | At least 3 simple list reports in a reporting tool (no control breaks, no graphs, single table) | | 3 | |
| 3. Reports | At least 2 transactional report with 2 or more control breaks (with heading and calculated values/totals, multiple tables) | | 6 | 15 |
| | At least 1 report with adjustable criteria | | 3 | |
| | At least 1 management report using a graph | | 3 | |

RALINEAR

Project Proposal – Paralinear Solutions

| 4. Flexibility | All data that can change in future should not be hard coded but maintained in a sub- module of the system (e.g., Lookup tables) | | 6 | 12 |
|----------------|--|--|---|----|
| | Some business rules are not hard coded but maintained in a sub-module of the system. | | 6 | |
| 5. Error | All system-generated errors are trapped, and consistent, user-friendly error5. Errormessages are displayed | | 6 | 12 |
| handling | Appropriate data validation on all input fields | | 6 | |
| | At least one menu item or other control that opens up a complete help document (HTML, PDF, Help-file) | | 3 | |
| 6. Help | Extensive context-sensitive help. E.g., calling Help on a specific screen/function will automatically open the specific help for that screen/function. | | 6 | 15 |

| | Search Facility on Help | | 3 | |
|------------------------|---|---|---|----|
| | Extensive use of hints | | 3 | |
| | Logon screen with user ID and password and fixed user profiles | | 3 | |
| - | Applying two factor authentications with applicable business reason. | | 3 | |
| 7. Security | Encrypted passwords in database | * | 1 | 13 |
| - | Flexible user profiles (i.e., you can dynamically add user profiles that will enable/disable access to certain parts of the system) | | 6 | |
| 8. Audit Trail | An audit trail of all transactions in the system showing at least date, time, user, transaction type, critical data (such as amount and quantity of transaction) | | 6 | 9 |
| - | Able to search the audit trail on any of the following: date, user, transaction type | | 3 | |
| | For a desktop application: Fully functional installation disks that take care of application installation requirements (install and uninstall) | | 3 | |
| | For an online application: Deployment of application to a publicly accessible web server | | 3 | |
| 9. Deployment – | For a mobile application: Deployment to an App Market place (such as the Play Store or the AppStore) | | 6 | 15 |
| - | Deployment of the database to a remote database server | | 3 | |
| 10. Backup and Restore | A backup and restore subsystem exist that backup/restore all data (system may exit during restore) | | 3 | 3 |
| 11. Import/Export Data | Able to open Word or Excel and automatically place data in it based on the parameters provided (with a good business reason) | | 6 | |
| | XML or JSON: At least 1 XMLor JSON file for Importing or Exporting of data (with good business reason) | | 3 | 9 |
| External INPUT device | Simple Link to an external INPUT device using plug and-play technology, such as a swipe card reader, bar code reader, etc. or a native component such as a QR reader, a GPS component, etc. | | 3 | 18 |

| | Loose Link to an external INPUT device using device specific software. Data or images must seamlessly be stored in the database, but device specific software is visible to the user. (This could include a digital camera, scanner, voice recording device, thump print reader, etc.) | | 6 | |
|---|---|---|----------|----|
| | Tight Link to an external INPUT device using device specific software. Data or images must seamlessly be stored in the database, but device specific software is not visible to the user. (This could include a digital camera, scanner, voice recording device, thump print reader, etc.) | | 9 | |
| | Integrate an existing web service into your application (with good business reason) | | 3 | |
| External APPLICATION / Services | A fully functional link to an installed external application system exists and the interface must be shown to work on the external system. Note that this excludes Microsoft Office Applications | | 6 | 9 |
| | Appropriate business use of static views on an alternative platform. | | 3 | |
| | Appropriate use of dynamic views on an alternative platform (i.e. data is displayed from the system's database) | | 3 | |
| I. Multiplatform processing for an appropriate business reason | Appropriate use of substantial dynamic views on an alternative platform (i.e. both reading and writing data from the system's database) | | 9 | |
| | Uploading a file through an alternative platform onto the system's database. | | 3 | |
| | Substantial processing on a third platform (i.e. both reading and writing data from the system's database) | | 9 | 27 |
| | The use of a data layer to facilitate interaction between your database and your business layer | | 3 | |
| . Programming Principles | The use of an API to facilitate interaction between your business layer and your presentation layer | | 6 | |
| | Comprehensive use of stored procedures and/or triggers and/or jobs. | | 3 | 12 |
| Innovative addition to the system | Any very advanced innovative addition to the system (e.g. machine learning, AI, block chain, text mining, IOT, etc.) | # | 1 - 9 | 9 |

Maximum Complexity Marks = 222

Total Calculated Complexity Marks = <u>171</u>

11. Deliverable Conclusion

This concludes all the information on Gohvan Construction and business problems identified after all in depth analyses such as the preliminary investigation and problem analysis have taken place. The operations of the Gohvan Construction and how Paralinear solution will fix the business problems identified by offering and developing the proposed system. The proposed system will provide major benefits to the company on offer a more streamline solution to effectiveness and efficiency throughout the daily operations and project life cycle.

| Michael van der Walt (Managing Director) | Gohvan Construction | michael@gohvan.co.z a | - | | | | | | |

3. Meeting Agenda

Discuss and delegate tasks for deliverable 0.

Discuss a team name.

Identify business problems and discuss how to possibly solve it.

Go through the complexity mark sheet and determine what we can incorporate in our system to solve the business problems.

4. Meeting Notes, Decisions, Issues, Progress made (list details responsibilities and tasks)

We established a few business problems and how we could possibly solve them as well as discussed how the complexity marks would come into play. We now have a rough idea of the system requirements and business rules. We arranged a follow up meeting with the client to discuss and get a better understanding of how the business operates at the moment and how the system can improve that.

After the meeting with the client, we discussed the following:

Matthew suggested a team name: Linear systems.

Tasks were identified and assigned for deliverable 0.

Amore suggested that we should start setting up Asana.

Vincent volunteered to set up Asana.

We discussed what type of system we would make.

15.2 MEETING MINUTES: 24 March 2021

| Project Name: | INF 370 Deliverable 1 | | |
|----------------------|-----------------------|-----------------|-------------|
| Date of Meeting: | 24/03/2021 | Location: | Google Meet |
| (MM/DD/YYYY) | | | |
| Minutes Prepared By: | Amore Rossouw | Charge time to: | |

1. Purpose of Meeting

Have a meeting with Michael van der Walt (The client) to discuss Site completion process (The process of planning and setting up a cell phone tower) in great detail and get a better understanding of the inner workings of the business.

| 2. Attendance at Meeting (add rows as necessary) | | | | | | | | |
|--|-----------------------|--------------------------|--------------|--|--|--|--|--|

| Michael van der Walt (Managing Director) | Gohvan Construction | michael@gohvan.co.z a | - | | | | | |

3. Meeting Agenda

Go through the Site completion process (The process of planning and setting up a cell phone tower) with Michael van der Walt and ask questions if necessary.

PARALINEAR

Have a group meeting afterwards to discuss how we can incorporate the current Site completion process into our system.

4. Meeting Notes, Decisions, Issues, Progress made (list details responsibilities and tasks)

Michael made a presentation to explain the 5-step Site completion process to us. He explained to us how each of the steps in the process works as well as showed us how the current documentation looks and what the roles of some the employees are.

After the meeting with Mr. van der Walt we discussed the following:

We decided on a team name: Paralinear.

We went through the steps of the Site completion process and discussed how we could automate those steps. We then identified possible subsystems, use cases and actors.

Michael Vosloo wrote down questions that we would like to ask Mr. van der Walt in our next meeting. We decided to meet up in person next week to start on Del 1.

We discussed our progress with Del 0.

| | subsystems, use cases and actors. | | | | | | |

15.3 MEETING MINUTES: 30 March 2021

| Project Name: | INF 370 Deliverable 1 | | |
|----------------------|-----------------------|-----------------|-----------------|
| Date of Meeting: | 30 March 30, 2021 | Location: | Hatfield Campus |
| (MM/DD/YYYY) | | | |
| Minutes Prepared By: | Vincent Yu | Charge time to: | |

1. Purpose of Meeting

The purpose of this meeting is to be acquianted with our team members again. After being separated for a year. It would be nice to meet and work in person on Hatfield campus.

Discuss project management, work schedule, assigning of tasks, work ethic etc.

| 2. Attendance at Meeting | (add rows as necessary) | | |

RALINEAT

3. Meeting Agenda

To work as a team in person on campus.

To discuss project management and assignment tasks.

To set dedicated work sessions for collaboration.

To discuss general guidelines regarding work ethic and accountibility.

4. Meeting Notes, Decisions, Issues

Dedicated work sessions in person will be vital for completing this deliverable and the entire project. ASANA setup and all tasks assigned.

Summary to be submitted to client after every meeting with them.

Do weekly status updates. No Judgement! Doing this helps everyone get a general idea of the project progression.

If workload is overwhelming, ask for assitance.

Up to date backup of the project and all documents.

Do not neglect other modules.

Take breaks.

| 6. Next Meeting | | | | | | | |
|-----------------|---|--|--|--|--|--|--|
| Date: | Date: 31 March 2021 Time: 10:30 Location: Google Meet | | | | | | |
| (MM/DD/YYYY) | | | | | | | |
| Agenda: | Meeting with Michael van der Walt (The client) to discuss the business processes in | | | | | | |
| | depth. The business rules will be defined by how the business performs its functions. | | | | | | |

15.4 MEETING MINUTES: 31 March 2021

| Project Name: | INF 370 Deliverable 1 | | |
|----------------------|-----------------------|-----------------|-------------|
| Date of Meeting: | 31/03/2021 | Location: | Google Meet |
| (MM/DD/YYYY) | | | |
| Minutes Prepared By: | Michael Vosloo | Charge time to: | |

1. Purpose of Meeting

The purpose of this meeting is to ask questions about confusion of the existing system the group had. Discuss the functions of the business and get more insight on to four types of sites that Gohvan construction does for their cell phone towers. Speak to the health and safety Officer that sets up the "As-Built Document" once a site is completely built and approved.

| 2. Attendance at Meeting | | | |
|---|-----------------------|--------------------------|--------------|
| Name | Department. /Division | E-mail | Phone |
| Michael Vosloo | - | u19031174@tuks.co.z a | 082 387 0072 |
| Matthew Veltman | - | u19050608@tuks.co.z a | 081 341 1664 |
| Vincent Yu | - | u15195059@tuks.co.z a | 084 073 7834 |
| Amore Rossouw | - | u19052864@tuks.co.z a | 073 567 3529 |
| Michael van der Walt (Managing Director) | Gohvan Construction | michael@gohvan.co.z a | - |
| Jenny Nienaber (health and safety Officer) | Gohvan Construction | jenny@gohvan.co.za | - |

3. Meeting Agenda

Discuss questions on system Discuss how each site operates and is constructed

Speak to Jenny Nienaber (health and Safety Officer)

Discuss Inventory and procurement

Discuss how inventory is tracked

Discuss "as-Built" document

4. Meeting Notes, Decisions, Issues, Progress made (list details responsibilities and tasks)

We made conclusions on questions we had previously drawn up from previous meetings discussion on the systems. We understand how to inventory system works and what is stored and what is not stored on the premises of Gohvan Construction. The "as-built" document was fully explained to us and what is entailed within the document and when it is drawn up by the health and safety officer to then be documented for future audits.

Michael Van Der Walt explained how each type of site functions and it's built up and what each site entails and all the necessary materials that are required for the specific site's constructions.

| Tshepang Mashao | - | u19293675@tuks.co.z | 074 447 0511 | | | |
| | | а | | | | |

3. Meeting Agenda

Go through the relevant elements for the rich pictures and decide and discuss all the functional requirements for the system, to ensure everyone understands and agrees on the system.

4. Meeting Notes, Decisions, Issues, Progress made (list details responsibilities and tasks)

We completed rough rich pictures on the system and compiled a list for the functional requirements. Went through a recording of last google meet session with our client to discuss elicitation techniques.

An issue we encountered was finding a gate to access campus as today was a public holiday.

| Tshepang Mashao | - | u19293675@tuks.co.z a | 074 447 0511 |

3. Meeting Agenda

To discuss critical and precise questions with our contact person that would clear misunderstandings found in the previous meeting and further analyse functional requirements and elicitation techniques.

4. Meeting Notes, Decisions, Issues, Progress made (list details responsibilities and tasks)

We learned of a few details that would have an impact on the system, such as business rules that cannot change (The 90 percent, 10 percent rule), no use cases that involve deleting or removing. We also learned of problems that could be solved by the quotation compilation automatically made after the TSS report is complete and understanding that not all documents relating to the RF report need to be included.

Project Proposal – Paralinear Solutions
